SUMMARY

Full stack developer with over a year of production experience building MERN apps. I've worked on an EdTech platform with live video classes, a rehab-centre directory with maps and an AI chatbot, and a community platform where each type of user gets different permissions. I'm comfortable on both the frontend and the backend, I deploy my own work, and I write small Python services when Node isn't the right tool for the job.

TECHNICAL SKILLS

Frontend: React.js, Next.js, JavaScript (ES6+), TypeScript, Tailwind CSS, Bootstrap
Backend: Node.js, Express.js, REST APIs, GraphQL, PHP, Python (microservices)
Databases: MongoDB, Mongoose, MySQL
Real-time: Socket.io, Agora SDK (RTC), Webhooks
Auth & security: JWT, bcryptjs, role-based access control, protected middleware, OTP verification
Integrations & tools: Google Maps API, AI chatbot, Cloudinary, Nodemailer, Multer, node-cron, Vite, WordPress
Deployment: Git, GitHub, Docker, Vercel, PM2, Apache , Linux

PROFESSIONAL EXPERIENCE

Brandingrain

Full Stack Developer | July 2025 – Present

Find Rehab Centres
Tech stack: React.js, Vite, Tailwind CSS, Node.js, Express.js, MySQL, Cloudinary, Google Maps API, AI Chatbot

- Built the whole platform: a public directory site, an admin dashboard and the API behind them, on React, Node/Express and MySQL.
- Made listings, categories and blog articles, with location-based search, reviews, and a way for visitors to report a listing.
- Added Google Maps with marker clustering, so browsing centres by state or area stays smooth even when the map has a lot of pins.
- Added an AI chatbot that helps visitors find a suitable centre and points them to treatment information.
- Admin side runs on cookie-based auth, Cloudinary for image uploads, and Nodemailer for the contact form and newsletter emails.

Samzara Community Platform
Tech stack: Node.js, Express.js, MongoDB, Mongoose, PHP, JWT, Agora SDK, Cloudinary, Nodemailer

- Built and maintained the backend for a community platform where each type of user gets different permissions and different content.
- Login uses JWT and bcryptjs-hashed passwords. Role-based access control and protected middleware keep every API route limited to the right people.
- Set up Agora for live audio and video: RTC token generation, session handling, and live classes.
- Wrote the REST APIs with request validation, one central error handler, and proper authorization checks.
- Used Cloudinary for media storage, and Nodemailer with node-cron for scheduled emails that nobody has to send by hand any more.
- Deployed to production with PM2 for process management and Apache as the reverse proxy, which made releases more reliable and kept uptime steady.

Evoluer Academy
Tech Stack: Node.js, Express.js, React.js, MongoDB, Socket.io, Agora SDK, Python

- Built an EdTech web app with a React frontend and Node backend, with separate dashboards for students, teachers and admins.

- ❖ Wrote the core modules: authentication, role-based permissions, attendance tracking, assignment submissions and course management.
- ❖ Used Agora and Socket.io for live classes and real-time video calls, with low delay.
- ❖ Added rate limiting and structured error handling so the API holds up when many users are online.
- ❖ Wrote Python services that turn PDFs into audio and generate subtitles, connected to Cloudinary, Nodemailer and CSV/PDF processing as one content pipeline.

Sentrimesh Consulting
Tech Stack: WordPress, Elementor

- ❖ Built and maintained the company's business website in WordPress and Elementor, and made sure it works well on phones.
- ❖ Customized themes, layouts and reusable components so the site matches the company's brand.
- ❖ Handled SEO and performance work to help the site show up better in search.
- ❖ Set up contact forms and lead-generation flows, and a way to manage business enquiries.
- ❖ Looked after plugins, security and backups, and worked with stakeholders on new features and usability fixes.

CERTIFICATIONS

Front End Development Certification | freeCodeCamp
Responsive Web Design Certification | freeCodeCamp

EDUCATION

Bachelor of Computer Application (BCA) **CGPA: 7.5**
S.V.S.D. P.G. College, Bhatoli (H.P.)

Senior Secondary, Science Stream
Himachal Pradesh Board

HOW I WORK

- I learn new tools when a project needs them, whether that was Agora for live video or Python for audio and subtitle processing.
- I'm good at taking a rough requirement, working out what actually needs to be built, and explaining it clearly to developers and non-technical teammates.
- I like working across teams and with stakeholders, and I'm happy to pick up whatever a project needs next.
- Mostly I work in JavaScript and Node, and I use Python where it's the better fit, such as audio and PDF processing.
